

MCP Access Audit

Five business days, fixed price, read-only. One agreed workflow where AI agents or MCP tools reach your systems.

THE QUESTION IT ANSWERS

When an AI agent acts inside your systems, what does each credential it holds actually authorise, and could you prove afterwards what it did? This audit answers that for one real workflow you choose. It is a look, not an accusation: it does not assume your current controls are deficient.

WHAT YOU GET

- **Permission map** for the agreed workflow: what each credential authorises, at server, tool and parameter level.
- **Observed risks and limitations**, stated against your existing configuration.
- **Prioritized RBAC and audit-trail actions**.
- **One-page written report**, then a **30-minute walkthrough** of the findings.

WHAT WE NEED FROM YOU

- One engineer who knows the workflow, for the kickoff call and the walkthrough, plus short questions in between.
- Read access to configuration: MCP server and client config, token and role definitions, relevant logs. A screen-share walkthrough works where direct access is not appropriate.
- Architecture docs, if they exist. None required.

FIVE BUSINESS DAYS

Day 1	Kickoff call. Agree the workflow, the systems in scope and the access we need.
Days 2–3	Map identities, tokens and scopes; trace what the workflow can reach and what gets logged.
Day 4	Write up risks, limitations and prioritized actions.
Day 5	One-page report delivered; 30-minute walkthrough.

The clock starts once the agreed access and documentation are available.

HOW YOUR DATA IS HANDLED

- We review configuration, permissions and logs, not your customers' records. No production data is copied out.
- Findings stay with you. An NDA is fine; send yours or we will send one.

OUT OF SCOPE

- Remediation work. Implementation is a separate engagement, from \$5,000.
- Penetration testing, exploit development, or vendor selection.
- Any guarantee that a gap does or does not exist.
- Workflows beyond the one agreed.

\$2,500 fixed · five business days · one workflow
